Hi Gregory, the update about EPA is good to know. Here's the information we are providing and it can of course be inserted into your press materials where you see fit I've highlighted in yellow and italics the key piece of information in case you are reading this from a hand held device. :

The chemical 4-methylcyclohexane methanol is safe for consumption, bathing and washing clothes if the measured levels are less than 1 parts per million. (ppm) If the levels of the chemical are less than 1ppm then public health officials do not expect individuals to experience adverse health effects. If a person has questions about their drinking water consumption and other household uses please contact their local public health authority. If there are questions about potential health impact, please contact their healthcare provider.

As discussed during our brief phone call today, please share completed materials with us prior to anything being issued. Good luck. I'll be monitoring my blackberry throughout the weekend and I'm available if needed.

Take care and good luck with everything.

Bernadette Burden  
Senior Public Affairs Specialist  
Division of News Media

Ms. Burden,

Thanks. EPA will have answers on Monday 1/13/2014.

Gregory it is on its way, we were confirming our phrasing with our environmental staff prior to sending.
